## Marie Skłodowska-Curie Postdoctoral Fellow

at

**University of Lausanne (Switzerland)**

Faculty of Geosciences and Environment

Institute of Earth Sciences

Section for *Paleoenvironment, Evolution of Life and Ocean Dynamics*

Laboratory for *Biogeochemical Oceanography Across Time (BOAT)*

UNIL | Université de Lausanne

and

**GEOMAR Helmholtz Centre for Ocean Research Kiel (Germany)**

Research Division 1: *Ocean Circulation and Climate Dynamics*

Research Unit *Paleo-Oceanography*

## CV summary

Positions	Expertise	Research	Teaching experience	Funding proposals
MSCA Fellow (UNIL & GEOMAR)	(Paleo) Climate	21 articles published (19 peer reviewed)	1 full course	5 successful as PI (~ 880 000€)
Postdoc Earth Sciences (UNIL)	(Isotope) Geochemistry	> 1000 citations	2 individual lectures	2 unsuccessful
Postdoc Earth Sciences	Oceanography	10 invited talks	16 students supervised	agencies: (DFG, SNSF, ERC)
PhD Physics	Trace Metals	h-index: 13	2 practical courses	
MSc Physics	(MC) ICP-MS	17 articles reviewed		
BSc Physics	Data Analysis	founding member of PAGES PO2 WG		

## Employment history:

- since 03.2023: **Marie Skłodowska-Curie Postdoctoral Fellow**,  
University of Lausanne (Switzerland),  
Institute of Earth Sciences,  
*Laboratory for Biogeochemical Oceanography Across Time*  
(with Samuel Jaccard, and Martin Frank at GEOMAR, Kiel, Germany)
- 03.2021 – 02.2023: **Post-Doctoral Research Assistant**, University of Lausanne (Switzerland),  
Institute of Earth Sciences,  
*Laboratory for Biogeochemical Oceanography Across Time*  
(with Samuel Jaccard)
- 07.2017 – 10.2020: **Post-Doctoral Research Assistant**, Heidelberg University (Germany),  
Institute of Earth Sciences,  
*Past Ocean Dynamics* (with Jörg Lippold)
- 08.2013 – 06.2017: **Doctoral Research Assistant**, Heidelberg University (Germany),  
Institute of Environmental Physics,  
*Physics of Environmental Archives* (with Norbert Frank)

## Education:

**PhD. in Physics** at Heidelberg University, Institute of Environmental Physics (2013 – 2017)

**MSc. in Physics** at Heidelberg University (2011 – 2013)

**BSc. in Physics** at Heidelberg University (2007 – 2011)

(including one Erasmus exchange semester at the University of Manchester, UK, in 2009)

## Work and research philosophy:

As a scientist at a public university, I contribute to societal advancement through fundamental research in climate and environmental science and teaching to students and the public. I commit to fostering a diverse and comprehensive education including laboratory and numerical methods, philosophical considerations, societal aspects, and a robust technical foundation.

My interdisciplinary approach, rooted in a physics education with a keen interest in chemistry, spans (palaeo-)climatology and marine isotope geochemistry. I prioritize detailed discussions of research and particularly value diverse perspectives to enhance interpretations of complex data. Collaborating with experts across disciplines is thus integral to my methodology.

In the laboratory, I ensure robust and efficient analyses by leveraging a deep understanding of the applied methods. This allows me to generate larger, more meaningful datasets, providing enhanced spatial and temporal coverage in palaeoclimatology. I often employ statistical analyses and simple box models to illuminate obscured processes in uncertain data, reinforcing the significance and confidence in interpretations while mitigating risks for biases.

## Field expeditions:

2023: **RV Polarstern Expedition 140**

*“East Antarctic Ice Sheet Instabilities 2:  
Southern Ocean Deep Water Circulation and  
the Interaction with the East Antarctic Ice Sheet”*

PI: Marcus Gutjahr

(Onshore participant for sediment pore water oxygen utilisation;  
Indian sector of the Southern Ocean)

2021: **GEOTRACES process study cruise GApr16 “MetalGate”**

PI: Rob Middag

(Onshore participant for seawater Nd isotope analysis;  
Subpolar North Atlantic and Nordic Seas around Iceland)

2018: **Research cruise M151 onboard RV Meteor**

PI: Norbert Frank

(CTD and multi-corer operations, sediment pore water extractions;  
Eastern North Atlantic and Azores Plateau)

2017: **Research cruise M141-2 onboard RV Meteor**

PI: Norbert Frank

(CTD operations; Eastern North Atlantic and Mediterranean Sea)

## Work in external Laboratories:

2023: Repeated research visits at Max-Planck Institute for Chemistry (Mainz, Germany) for biomarker extraction and analyses and scientific exchange

2019 - Repeated research visits at University of Cologne (Germany) for ICP-QMS measurements  
2020: and scientific exchange

2013 - Research visits at MARUM (Bremen, Germany), University of Bordeaux (France), Ifremer  
2020: (Brest, France), and LSCE (Gif-sur-Yvette, France) for marine sediment sampling and scientific exchange

2013 - Repeated research visits at GEOMAR (Kiel, Germany) for MC-ICP-MS measurements and  
2016: scientific exchange

2011: Internship at Southampton Oceanographic Centre (UK) in Prof. Gavin Foster’s research group, working on boron isotope analyses from planktonic foraminifera

## Invited Talks:

- 2024: National Oceanography Center, Southampton (UK), Paleo & Geochemistry seminar series
- 2023: Institute of Environmental Sciences at Heidelberg University, Institute's seminar series
- 2022: - PAGES' *Ocean Circulation and Carbon Cycling* virtual seminar series  
- Woods Hole Oceanographic Institution (USA), Climate and Paleo seminar series  
- University of Bonn (Germany), Environmental Geology group  
- Max Planck Institute for Chemistry (Mainz, Germany), Climate Geochemistry Seminar
- 2021: Department of Geography of University College London (UK)
- 2020: - School of Earth Sciences at University of Bristol (UK)  
- Solicited presentation at EGU General Assembly (Sharing Geoscience Online) session "*Tracers in the Paleo Sea*"
- 2018: Lamont-Doherty Earth Observatory (USA)

## Workshops and Conferences:

- 2024: **Co-organiser** of 3-day PAGES PO2 working group workshop  
"*Ice sheets, ocean oxygenation and the carbon cycle: Constraining changes in seawater oxygenation during the late Quaternary*"  
in Bristol, UK.
- 2023: **Co-organiser** of 1-day workshop  
"*What can marine authigenic Nd isotopes be reliably used for?*"  
at the Goldschmidt Conference on geochemistry
- 2021: **Co-convenor** of Goldschmidt Conference on Geochemistry session  
"*Drivers of the climate system over the Cenozoic Era*"
- 2019: **Lead convenor** of EGU General Assembly session "*The role of ocean circulation in glacial-interglacial climates*"
- 2018: Participation and presentation at PAGES' OC3 / IPODS workshop (Cambridge, UK)
- 2017: Nature Geoscience Poster Award at Pages Young Scientists Meeting (Zaragoza, Spain)
- 2013: Participation at ECORD Summer School "*Deep-Sea Sediments – From Stratigraphy to Age Models*" at MARUM (Bremen, Germany)

Regular active participation at international conferences such as AGU Fall meeting, EGU's General Assembly, Goldschmidt Conference on Geochemistry, International Conference on Paleoceanography and others (1 – 2 per year).

## Public outreach:

2020: Presentation and discussion about climate change for high-school students at “Akademie für Kommunikation” secondary school, Karlsruhe, Germany

## Career development trainings:

- Leadership in academia and beyond
- Negotiation: mindset and tools
- Online representation skills
- Project management for researchers
- Presentation skills

## Others:

- **Founding member and communication officer** of the ongoing PAGES (Past Global Changes) working group *Past Ocean Oxygenation (PO2)*
- **Founding member** of the working group *Proxies of Ocean Circulation and Water Properties: Evaluation, Reconstruction and Simulation (POWERS)*
- **Post-Doc representative** at the Institute of Earth Sciences at the University of Lausanne since 2023

## **Skills:**

**Languages:** German (native speaker), English (excellent command), French (good command), Spanish (basic command)

**Programming:** R (good proficiency), Visual Basic (intermediate), Python (basics)

**Laboratory methods:** sequential sediment leaching and total digestion, liquid column chromatography, clean laboratory set up, use, and management, ICP-MS use and management, identifying and picking sediment particles such as foraminifera or ice rafted debris, ship-based CTD and sediment multi-corer operations and sampling

**Measurement techniques:** MC-ICP-MS (expert), ICP-QMS (expert), HR-ICP-MS (experienced), ICP-OES (basic knowledge), TIMS (basic knowledge), XRF (basic knowledge), XRD (basic knowledge), RockEval (basic knowledge)

**Data science:** data base management  
statistical data analysis  
visualisation of complex data  
numerical model development and application  
geospatial data analysis and visualisation

**Safety:** training in fire protection, handling of dangerous chemicals, handling of hydrofluoric acid, field safety and inclusivity

## Ongoing research projects:

### Atlantic deep water circulation since the Last Glacial Maximum

The last glacial maximum about 20 thousand years ago, and the following deglaciation and warm Holocene form the best and most precisely investigated time interval for palaeoclimate research. My primary goal is to further question and improve our understanding of the changes that occurred in this period in the oceans and the whole climate system. I am particularly interested in investigating this problem from different angles with different sedimentary proxies such as stable isotopes in foraminifera shells, the neodymium (Nd) isotope composition of authigenic precipitates, or the ratio of the two uranium-derived isotopes protactinium and thorium. Combining different proxies allows for more comprehensive and accurate conclusions and the evasion of biases that may occur if we only investigate one proxy at a time. Most of our established views of changes in the distribution of water masses in the deep ocean rely on nutrient-based proxies and, for example, Nd isotopes as an inorganic water mass provenance tracer can add a complementing different view to these studies.

### Biological productivity, ocean circulation, and carbon storage in the Southern Ocean

The Southern Ocean connects all world oceans and hosts formation of the densest waters that fill the deep ocean basins. Active vertical mixing around its frontal systems leads to high primary productivity. Apart from its ecological importance, this productivity binds the greenhouse gas carbon dioxide from the atmosphere and exports it to the deep ocean via sinking organic particles, where it can be stored for hundreds and thousands of years. Therefore, the circulation and productivity of the Southern Ocean are an integral modulator of global climate. In this project I investigate both these processes with biogenic and non-biogenic proxies across the last glacial cycle.

### Marine sediments as sinks and sources of dissolved trace metals

The oceans are full of trace metals that reside in the water column for different durations, depending on their chemical speciation and specific conditions of the seawater. Marine sediments are a major sink for most of them, leading to their long time storage and geological recycling. Thus, the distribution of these trace metals in the seawater-derived phase of sediments can yield information about the conditions of past seawater. For example, the speciation and thus reactivity and residence time of many trace metals depends on the seawater redox conditions, which are tightly linked to oxygen concentrations and can therefore serve as a proxy for past deep ocean oxygenation.

My current EU-funded Marie Skłodowska-Curie project “*OxyQuant*” combines all these topics. It is based on the investigation of trace element behaviour during early diagenesis in order to use these elements as proxies for past ocean oxygenation, and thus past ocean circulation and carbon storage.

- Geochimica et Cosmochimica Acta
- Marine Geology
- Minerals
- Nature
- Nature Geoscience
- Quaternary Science Reviews
- Rapid Communications in Mass Spectrometry

### Organisations

- UK Research and Innovation (UKRI)

## Acquired funding:

- 2022: European Commission **Marie Skłodowska-Curie Global Fellowship** for 3 year project on the use of trace metal geochemistry in marine sediments for the reconstruction of bottom water oxygen concentrations (~ 320 000 €)
- 2022: SNSF **Swiss Postdoctoral Fellowship** for 2 year project on the use of trace metal geochemistry in marine sediments for the reconstruction of bottom water oxygen concentrations (~ 226 000 CHF, declined by me due to parallel project)
- 2021: **SNSF Flexibility Grant** (~ 35 000 €)
- 2015: **DFG research grant** for 3 year PhD project on ocean circulation reconstruction of the past 1 Million years with Nd isotopes, proposed together with Jörg Lippold and Norbert Frank (~ 150 000 € )
- 2013: **DFG research grant** for own 3 year PhD project on Last Glacial Maximum ocean circulation reconstruction with Nd isotopes, proposed together with Jörg Lippold (~ 150 000 € )

## Teaching:

- **Introduction to Paleoclimate**  
5 day x 3h lecture course within the frame work of the 51<sup>st</sup> Heidelberg Physics Graduate Days of the Heidelberg Graduate School of Fundamental Physics  
Heidelberg University (D), in English
- **Orbital- and millennial-scale CO<sub>2</sub> variability during the Pleistocene**  
3h lecture in the series *Climate and paleoclimate: from deep time to the Anthropocene*  
University of Lausanne (CH), in English
- **Ocean Circulation and Marine Biogeochemistry**  
4h lecture in the series *Geochemical cycles and rates of geological processes*  
University of Lausanne (CH), in English
- **Practical training course in physics for earth scientists**  
(execution, description, and evaluation of physical laboratory experiments)  
Heidelberg University (D), in German
- **Practical field experiments in physical limnology**  
(CTD measurements on an artificial lake and radon decay counting in the laboratory)  
Heidelberg University (D), in German
